

## New Formulation for MGL 180

Black shades are particularly important for printing on glass since they are indispensable for many purposes, e. g. for borders, control panels, or as blocking layers.

Based on new findings resulting from our tests, we have decided to adopt further optimizations.

Following the recent change in formulation of MGL 188, we have implemented an improved formulation for MGL 180 as well. The new formulation of MGL 180 (just like MGL 188) is characterized by higher density values, outperforming even with thin ink deposits.

Other properties do not change with the new formulation.

For further information on Mara® Glass MGL please refer to [www.marabu-inks.com](http://www.marabu-inks.com)

### Date of Change-Over

This change becomes effective starting with batch 704. You will find an additional remark on the label stating:

**„Attention: Improved Formula“**
